

Job Description of Software Design Trainee (App Dev & Data AI)

Campus Hiring — Revised 2027

01 Duties and Responsibilities

- Should participate actively in project planning and daily standups.
- Should develop and unit-test code for the assigned modules.
- Should be a quick learner and pick up new technologies as per project need.
- Should be able to troubleshoot issues and provide root cause analysis.
- Should demonstrate curiosity to explore how AI/LLM-based tools and agentic approaches can improve development speed, code quality, or data workflows within assigned modules.

02 Requirements

- Should be able to articulate thoughts clearly and precisely.
- Should be a good team player.
- Should be proactive and adaptive.
- Should be flexible to work on any technology stream.
- Should have a strong foundation in problem-solving and data structures/algorithms, not just familiarity with tools/frameworks.
- Should have knowledge of the below listed skills.

S. No	Soft skills	Technical Skills (App Dev)	Technical Skills (Data AI)
1	Business Etiquette	Concepts - OOPS, Multi-Threading, XML	SQL programming
2	Language & Communication skills	Framework - .NET	Data storage
3	Business Writing/ Email Etiquettes	Language - C#	Data Cleaning, Modelling and Analysis
4	Presentation skills	SQL - Microsoft SQL	Reporting
5	Teamwork & Interpersonal skills	Tools - Visual Studio 2019 or Visual Studio Code	Exposure to GenAI/LLM concepts and agentic frameworks (e.g., LangChain, Semantic Kernel, AutoGen, RAG pipelines) is a plus

6	Continuity in speech & Growth mindset	-	-
---	---------------------------------------	---	---

03 Qualification Required

- Must have B.Tech/B.E in CS, IT or closely related discipline .
- Should have no backlogs.
- BTech/BE with minimum 80 % aggregate in final year, with no gap in education.
- Ready to work from the office on all 5 days.
- Should be flexible to work from BNG location.

04 Preferred Qualifications / Added Advantage

These are not mandatory but will be treated as strong differentiators during shortlisting. Preference will be given to candidates who demonstrate two or more of the following:

- **Internship experience:** Completed an internship in software development, data engineering, analytics, or AI/ML, especially one involving real production or client-facing work.
- **Research contribution:** Has published, presented, or co-authored a paper/poster at a conference, journal, or college symposium.
- **Techno-fest / hackathon participation:** Participated in or won technical events such as Smart India Hackathon, inter-college hackathons, coding contests, or tech fests.
- **Hands-on AI agent / GenAI projects:** Has built or contributed to systems leveraging AI agents or LLMs e.g., agentic workflows (LangChain, AutoGen, CrewAI), RAG pipelines, copilots, or automation using generative AI.
- **Competitive programming profile:** Active and rated profile on platforms like LeetCode, Codeforces, CodeChef, or HackerRank reflecting strong DSA/problem-solving ability.
- **Open-source contributions:** Meaningful commits, pull requests, or maintained repositories on GitHub/GitLab that can be reviewed.
- **Cloud exposure:** Hands-on project work or certification on Azure (preferred), AWS, or GCP.
- **Certifications:** Relevant certifications in Cloud, Data, AI/ML, or Software Engineering (e.g., Microsoft Certified, NPTEL, Coursera, DeepLearning.AI).
- **Leadership / community involvement:** Active role in technical clubs or student chapters (e.g., GDSC, IEEE, ACM, coding club), organizing events, mentoring peers, or driving initiatives.
- **Demonstrated self-driven learning:** Personal projects, technical blog posts, or side builds that go beyond coursework and show initiative to learn independently.
- **Adaptability to new AI tooling:** Comfort experimenting with and quickly adopting new AI-assisted development tools (e.g., GitHub Copilot, Claude Code) given how fast this space evolves.
