WORK EXPERIENCES

Deep Learning Intern

Aug 2025 - Feb 2026

Authenta AI

India

- **Developed** a **Deepfake Detection model** using **MarlinEncoder** and a **Feedforward Neural Network** achieving classification accuracy of **91%**.
- **Established** an automated **face-extraction pipeline** using **MTCNN**, **OpenCV** and **s3fs** for video datasets stored in **AWS S3**.
- **Created** a **Deepfake Detection model** with **YOLOv8**, trained on the **COCO dataset** with custom bounding-box annotations derived from face masks.
- **Experimented** an **end-to-end detection pipeline** integrating custom augmentation and pooling layers using **Xception** achieving classification accuracy of **89%**.

AI Research Intern

May 2025 - Jul 2025

Foviatech

Remote • Germany

- Prepared and presented detailed **project proposals** backed by extensive research and analysis.
- Gained exposure to large-scale industrial operations through projects for **MAERSK**.

PROJECTS

AI-Based Workplace Behavior Monitoring System | 🔗 GitHub

- Developed a real-time computer vision system using **OpenCV** and **MediaPipe**, processing **468 facial** and **33 pose** landmarks at **25-30 FPS** to monitor posture and fatigue
- Constructed a **Hybrid SQL + RAG architecture** that stores structured behavior logs in **Supabase** and utilizes **Pinecone** for efficient retrieval of wellness and productivity insights.
- Implemented a **Dual-Agent AI pipeline** using **LLaMA 3.3 (70B)** where one agent processes behavioral data (SQL Agent) and another retrieves contextual information (RAG Agent), integrating both to provide actionable workplace improvement suggestions.

Techstack : Python, LangChain, OpenCV, SQL, Supabase, Pinecone

Skin Disease Detector | 🔗 GitHub

- Designed and trained a **CNN-based deep learning model** for automated skin disease classification, and deployed it through a responsive web interface for real-time predictions.
- Implemented data augmentation techniques (**rotation, flipping, scaling**) and image normalization to improve generalization and reduce overfitting on limited medical image data.
- Optimized training using the **Adam optimizer** with appropriate learning rate scheduling, achieving **95%** classification accuracy on the validation dataset.

Techstack : Python, TensorFlow, Flask

SKILLS

Programming Languages : Python, Java

Frameworks & Libraries : Scikit-Learn, TensorFlow, PyTorch, NumPy, Pandas, LangChain, Flask

Databases : MySQL, Supabase, Pinecone

Cloud Services : AWS

Tools & Platforms : Git, GitHub, Hugging Face, Jupyter Notebook, Anaconda, Weight & Biases, Kaggle

EDUCATION

St. Joseph's College of Engineering

Sep 2023 - Expected 2027

B.Tech Artificial Intelligence and Machine Learning

CGPA : 8.76

AWARDS & ACHIEVEMENTS

- Finalist among 5,200+ teams in SAP HackFest 2025
- **2nd place** in intra-college Hack-O-Mania (32 teams).
- Ranked **Top 5** in intra-college PROJECTFEST-24 (110 teams).
- Ranked **Top 15 / 100+** teams in Sustain-AI-thon.
- Ranked **Top 8 / 250+** teams in Datathon.
